What ambassadors had to say:

Getting people to be smarter about emails and the internet behaviors is rewarding to me.

Just informing and educating people is a success for me.

[Peers'] level of confidence in phishing detection has definitely improved.

What ambassadors had to say:

I joined to learn more myself about hackers and what Mayo is having to do to keep them out.

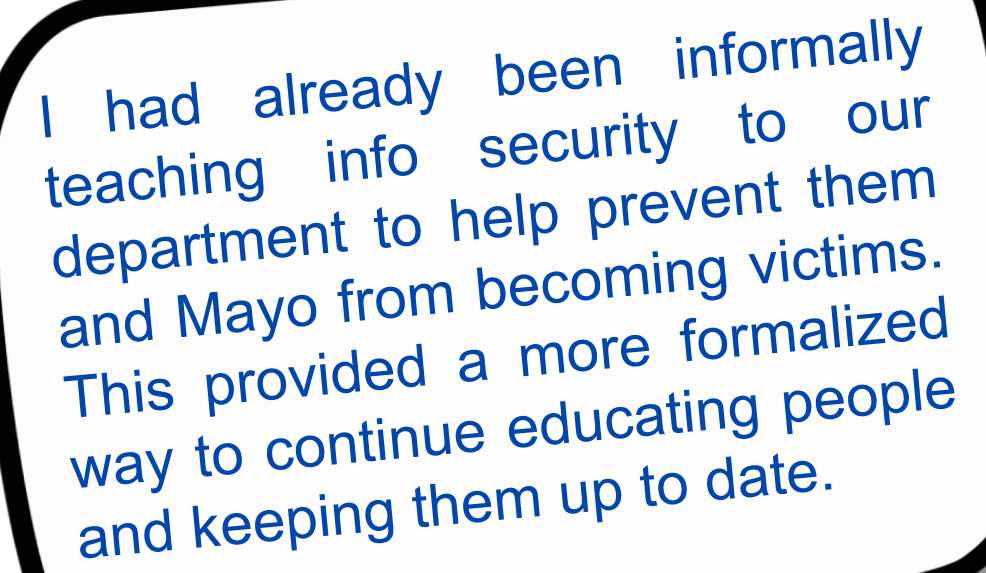

I enjoy helping my coworkers with technology.

I work on the patient advocacy team, and regard privacy and security as key issues for the institution and its patients.

What ambassadors had to say:

I'm always looking for opportunities to share.

I had already been informally teaching info security to our department to help prevent them and Mayo from becoming victims. This provided a more formalized way to continue educating people and keeping them up to date.
